

XTALFLUOR® REAGENTS

XtalFluor-E⁺

XtalFluor-M⁺

Manchester Organics, in partnership with OmegaChem, have developed and commercialised a **new, safer, crystalline fluorinating reagent**.

In the past, organic chemists needed DAST, Deoxo-Fluor® and more recently Fluolead to perform fluorinations, but XtalFluor® reagents have many benefits over these.

ADVANTAGES OVER DAST & DEOXO-FLUOR®

- Easily handled crystalline solids
- Enhanced thermal stability
- No generation of free HF – compatible with glass
- Consistently less elimination side products
- Less stringent shipping restrictions
- Lower cost

WHERE TO BUY

Multi-kilo quantities available
through Manchester Organics

A Group Company of Navin Fluorine International Limited

XtalFluor-E® and XtalFluor-M® are registered trademarks of OmegaChem, Inc.
